

**In the Abstract:**

*Following the claims, please add the abstract as follows:*

**—Abstract of the Disclosure**

A container (1) for hot-from-cooking poultry having a recessed base (2) with side-walls (3, 4, 5, 6), a domed lid (7), and a hinge (14) connecting the lid (7) to the base. The lid and the base are adapted for closure of the container around a joint surface (11). The hinge (14) is provided at the joint surface and at one side of the container (1) and extending along a straight hinge region spaced out from the intersection of one of the side-walls of the recess and the joint surface. The side-wall has a portion (17) angled at an acute angle with respect to the joint surface, and being generally coplanar with the hinge region. The container can be stood with the wall portion and the hinge on a support surface, with the intersection of the side-wall of which it is a portion and joint surface set up from the support surface.--
